

Sales Performance — Key Insights & Recommendations

Analysis period: January – July 2025 | 100 orders | Source: Cleaned sales dataset

Total Revenue	Total Profit	Profit Margin	Avg Order Value
Rs 16,66,400	Rs 2,61,480	15.7%	Rs 16,664

Key Insights

- **North is the dominant region**, generating Rs 8,53,600 — 51% of total revenue — more than the other three regions combined, despite all four regions logging an equal 25 orders.
- **Electronics drives the business**: 73% of revenue (Rs 12,21,000) comes from Electronics, led by **Laptop** (Rs 5,69,000) and **Smartphone** (Rs 2,73,000) — together 51% of all sales.
- **Furniture and Stationery are minor contributors**, at 24.5% and 2.2% of revenue respectively, indicating a narrow, electronics-led product mix.
- **Profit margins are stable across regions** (15.2%-16.4%), so the North's revenue lead is a volume story, not a margin story.
- **Sales peaked in May** (Rs 2,99,400, +36% vs April) then declined sharply, with **July down 39%** month-on-month to the period's lowest point (Rs 1,66,300).

Business Recommendations

- **Investigate the July drop-off** (-39% MoM) before it compounds — check for stockouts, seasonal demand, sales-team capacity, or a paused campaign; a one-month dip can become a trend if the cause isn't addressed quickly.
- **Reduce dependence on the North region**: with East, West and South generating similar or better margins on equal order volume, targeted regional campaigns (matching North's promotions/distribution) could lift total revenue significantly.
- **Double down on Laptop and Smartphone** — they already drive over half of revenue; prioritize inventory, supplier terms, and bundling/cross-sell offers (e.g., accessories like Mouse, Keyboard) around these two products.
- **Grow Stationery selectively, don't over-invest**: at 2.2% of revenue it's not a priority, but low-cost bundling with Electronics purchases could lift attach-rate without dedicated spend.
- **Set a recovery target for Q3**: aim to bring monthly sales back toward the Jan-Jun average (~Rs 2,50,000/month) and track Month-on-Month Growth weekly using the Power BI dashboard slicers.
